Line is the path of a moving point. Create different types of line: straight, curvilinear, thick, thin, jagged- can you think of more?

Shapes are 2 Dimensional areas enclosed in a line. Create Geometric shapes and Organic shapes below.

Value is the lightness or darkness of something. Create your own value scale below.

Form is a 3 Dimensional object or the illusion of a 3D object on a 2D surface. Create some forms below by adding value to the shapes.
**Color**

Color is the visual sensation dependent upon the reflection or absorption of light from a given surface. Fill in the color wheel.

**Space**

Space is the area between, around, above, below, or contained within objects. Negative space is the area unoccupied by objects. Positive space is the space representing an object.

Draw the positive space of your hand in one box and the negative space of your hand in the other box.

**Overlapping and Size**

Another way to show space is to overlap objects, and to make things look smaller as they recede into the distance. Try overlapping some stick figures or other objects and make them smaller as they go into the distance.

**Perspective**

Linear perspective uses the horizon and vanishing points to create the illusion of depth on a 2D surface. Try to make a box in 1 point perspective.

**Texture**

Texture is the surface quality of an object, either real or implied. Create some textures below.
